About

BTech Biotechnology student at Lovely Professional University. I enjoy learning new technologies and turning ideas into simple, low-cost inventions. I am looking for a job in biotech and food processing after graduation.

Featured Project: Low-Cost Lightweight Milk Chilling Can (in progress)

A can for small-scale dairy farmers and door-to-door milkmen who carry milk on cycles or two-wheelers, where electricity and bulk coolers are not available.

- **Problem:** milk delivered in summer heat loses quality before it reaches customers.
- **Approach:** sealed phase change material (PCM) cartridges inside a lightweight can keep milk cold during the delivery round without power.
- **Status:** concept and design developed; I am working on it now.
- **Next:** prototype, temperature-vs-time testing, cost comparison.

Education

BTech, Biotechnology - Lovely Professional University, Punjab (2026 to present)
Class XII, UP Board - 65.8%
Class X, CBSE - 66%

Skills

Problem solving · Product ideation · Technical writing · MS Office / Excel · Basic lab techniques

Research Interests

Phase change materials for cold storage, milk quality and shelf life, low-cost technology for rural supply chains.

Certifications, Internships, Leadership

Will be updated soon. Seeking an internship in biotech and food processing.
